

One Single Vulnerability Is All An Attacker Needs

Why You Should Be Worried

With the rise of cyber attacks targeted on organizations, your time is running out. In fact, it has likely run out and you just haven't notice it yet.

Hacking is quickly becoming an automated process, allowing even unskilled computer users to become cyber criminals.

With the abundant resources available on the Internet, the simple effort to download a hacking software and get it running is something to worry about.

As such, it has become crucial for organizations to undertake regular vulnerability assessments and penetration testing (VAPT) to ensure that their cyber security controls are working as it should.

Our Solution

LGMS vulnerability assessment and penetration testing services (VAPT) focus on real security and compliance problems. We make sure to understand your business and operational environment, so that we can tell whether the irregularities matter to you.

At LGMS, we believe that VAPT should not be entirely based on automated tools. When our penetration testing team uncovers a vulnerability, we drill down for more information.

Aside from that, we will also provide you with the best methods to remediate the reported vulnerabilities in line with the requirements of your business environment.

Vulnerability Assessment & Penetration Testing

Get The Most Out of Your Vulnerability Assessment and Penetration Testing with LGMS

“Security is not a product, but a process.”
- Bruce Schneier, security researcher

How Do You Benefit?

Our VAPT approach does not only rely on standard methodologies such as OWASP, NIST and more. Instead, we blend in our years of real practical experiences in various cases of incident response into our penetration testing methodologies.

Our objective is to provide clients a cost effective solution with incomparable quality of service.

Rest assured that our clients will always receive a realistic risk report and most up to date security posture of their IT assets.

LGMS is backed by solid track records over the years. Our professional penetration testing team regularly work with major financial and government institutions pro-actively to ensure that their servers and network devices are tested to identify vulnerabilities and minimize potential risks exposure.

Our Services Provided

1. Vulnerability Assessment
 - Internal or External
 - Black Box or White Box
2. Penetration Testing
 - Internal or External
 - Black Box or White Box

Executive Reports

A detailed report will be presented with the main topics covered below:

- High level technical summary
- In-depth analysis of each host
- Security risk rating
- ...and more!
