

Secure the DNA of Your Applications

Uncover hidden vulnerabilities
within application source code

Source Code Security Review, also known as Secure Code Review is the process of auditing application source code to verify that proper security controls are present, working as intended and invoked in all the right places.

Source Code Security Review is a way of ensuring that the application is developed to be “self-defending” in its given environment.

With over a decade of experience, LGMS has reviewed more than 10 billion lines of code and the numbers are still growing. LGMS’ source code security reviewers are well versed in more than 20 different programming languages such as Java, Ruby, Objective C, Swift, VB.NET, etc.

OUR COVERAGE

LGMS Source Code Security Review focuses on seven security areas. As weaknesses in any of these areas will make the application more susceptible to malicious attacks, source code security review aims to inform developers on the robustness of the source code in each of these areas:

- ▼ Authentication
- ▼ Authorization
- ▼ Session management
- ▼ Data Validation
- ▼ Error handling
- ▼ Logging
- ▼ Cryptography

Securing the Future

LGMS spearheads the cyber security industry by being the first in the country in various areas of specialization. Here are some of LGMS' latest achievements.

The leading cyber security expert in Asia and trusted by multinational corporations around the world, LGMS is a cyber security consulting company focused on delivering specialized cyber security assessments, consultation and advisory services.

Established in 2005, LGMS has since built a reputation for its integrity, values and best practices by providing world-class professional services to local, regional and international clients across various industries and backgrounds.
