

Hackers Love Web Application

Web Applications are Attractive
Targets for Hackers

Just as you are reading this, a hacker could be probing and prodding relentlessly at your external-facing web application in order to uncover weaknesses to exploit your application. With Web Application Penetration Testing, you can discover loopholes in your web application and evaluate its current security posture, allowing you to take action before the hacker does.

At LGMS, we work closely with our clients in a proactive manner to understand their application workflow and ensure that their web applications are thoroughly tested to minimize the risk of a security breach.

To date, our Web Application Penetration Testing has become an integral part of the Software Development Life Cycle (SDLC) for many of our regional clients—providing guidance for our clients in building more secure web applications while accommodating complex business requirements.

OUR COVERAGE

LGMS adheres to worldwide industry standards and customizes tests leveraged from our vast penetration testing experience in various industries.

The tests include but are not limited to:

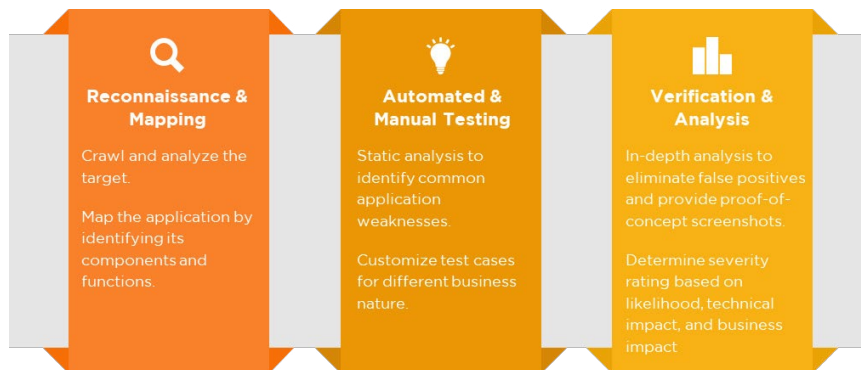

- ▶ Bypassing Business Process Workflow
- ▶ Bypassing File Upload Restrictions and Extension Filters
- ▶ Bypassing Function Level Access Control
- ▶ Bypassing Weak Data Validation
- ▶ Data Exfiltration
- ▶ Privilege Escalation
- ▶ Post Exploitation for Server Takeover
- ▶ Session Hijacking

Web Application Penetration Testing

At LGMS, we are committed to a highly-disciplined and methodical penetration testing practice—utilizing a combination of a wide range of commercial and open-source tools as well as manual penetration tests. Our methodology not only adheres to worldwide industry standards such as Open Source Web Application Security Project (OWASP), we also conduct customized tests based on the application’s business logic.

All vulnerabilities identified will be manually verified to weed out false positives. A comprehensive penetration testing report will then be produced with guidelines for remediation for each discovered vulnerability.

DELIVERABLES

LGMS will present a penetration testing report with the following:

- ▶ Executive Summary
- ▶ In-depth Application Vulnerability Technical Details
- ▶ Security Risk Rating (OWASP Risk Rating) and Prioritization of Findings
- ▶ Comprehensive Remediation Guidance
- ▶ Recommendation for Future Improvements

LGMS' Web App deliverables are accepted as a baseline for TÜV TRUST IT's "Trusted Infrastructure" certification

Securing the Future

LGMS spearheads the cyber security industry by being the first in the country in various areas of specialization. Here are some of LGMS' latest achievements.

The leading cyber security expert in Asia and trusted by multinational corporations around the world, LGMS is a cyber security consulting company focused on delivering specialized cyber security assessments, consultation and advisory services.

Established in 2005, LGMS has since built a reputation for its integrity, values and best practices by providing world-class professional services to local, regional and international clients across various industries and backgrounds.

- 2017 Cyber Security Company of the Year
- First Center for Internet Security (CIS) Member Company
- First Cyber Security Company Certified in ISO/IEC 27001:2013
- First Cyber Security Company Certified in ISO/IEC 9001:2015
- First CREST Certified Penetration Testing Company
- First MILE2 Certified Training & Examination Provider
- First Payment Card Industry (PCI) Approved Scanning Vendor (ASV)
- First PCI Qualified Security Assessor (QSA) Certified with PCI ASV Status
- First PECB Certified Training & Examination Provider
- First TÜV Trust IT Accredited Tester
- 2019 IDC Report: Asia/Pacific Internet of Things Security Landscape and Key Vendors
- Common Criteria EAL2 Certification for LGMS Security Assessment Report Generator (LGMS Reporter) v1.0.0
- Cyber Security Assessor for SWIFT Customer Security Programme (CSP)
