

Compromise Assessment

Identify Hacker's Footprint

Compromise assessment is to identify whether the network or systems are compromised. Potential compromise within your organization can be discovered through identifying footprints left by attackers, suspicious indicators in the network, and abnormal usage of computer resources.

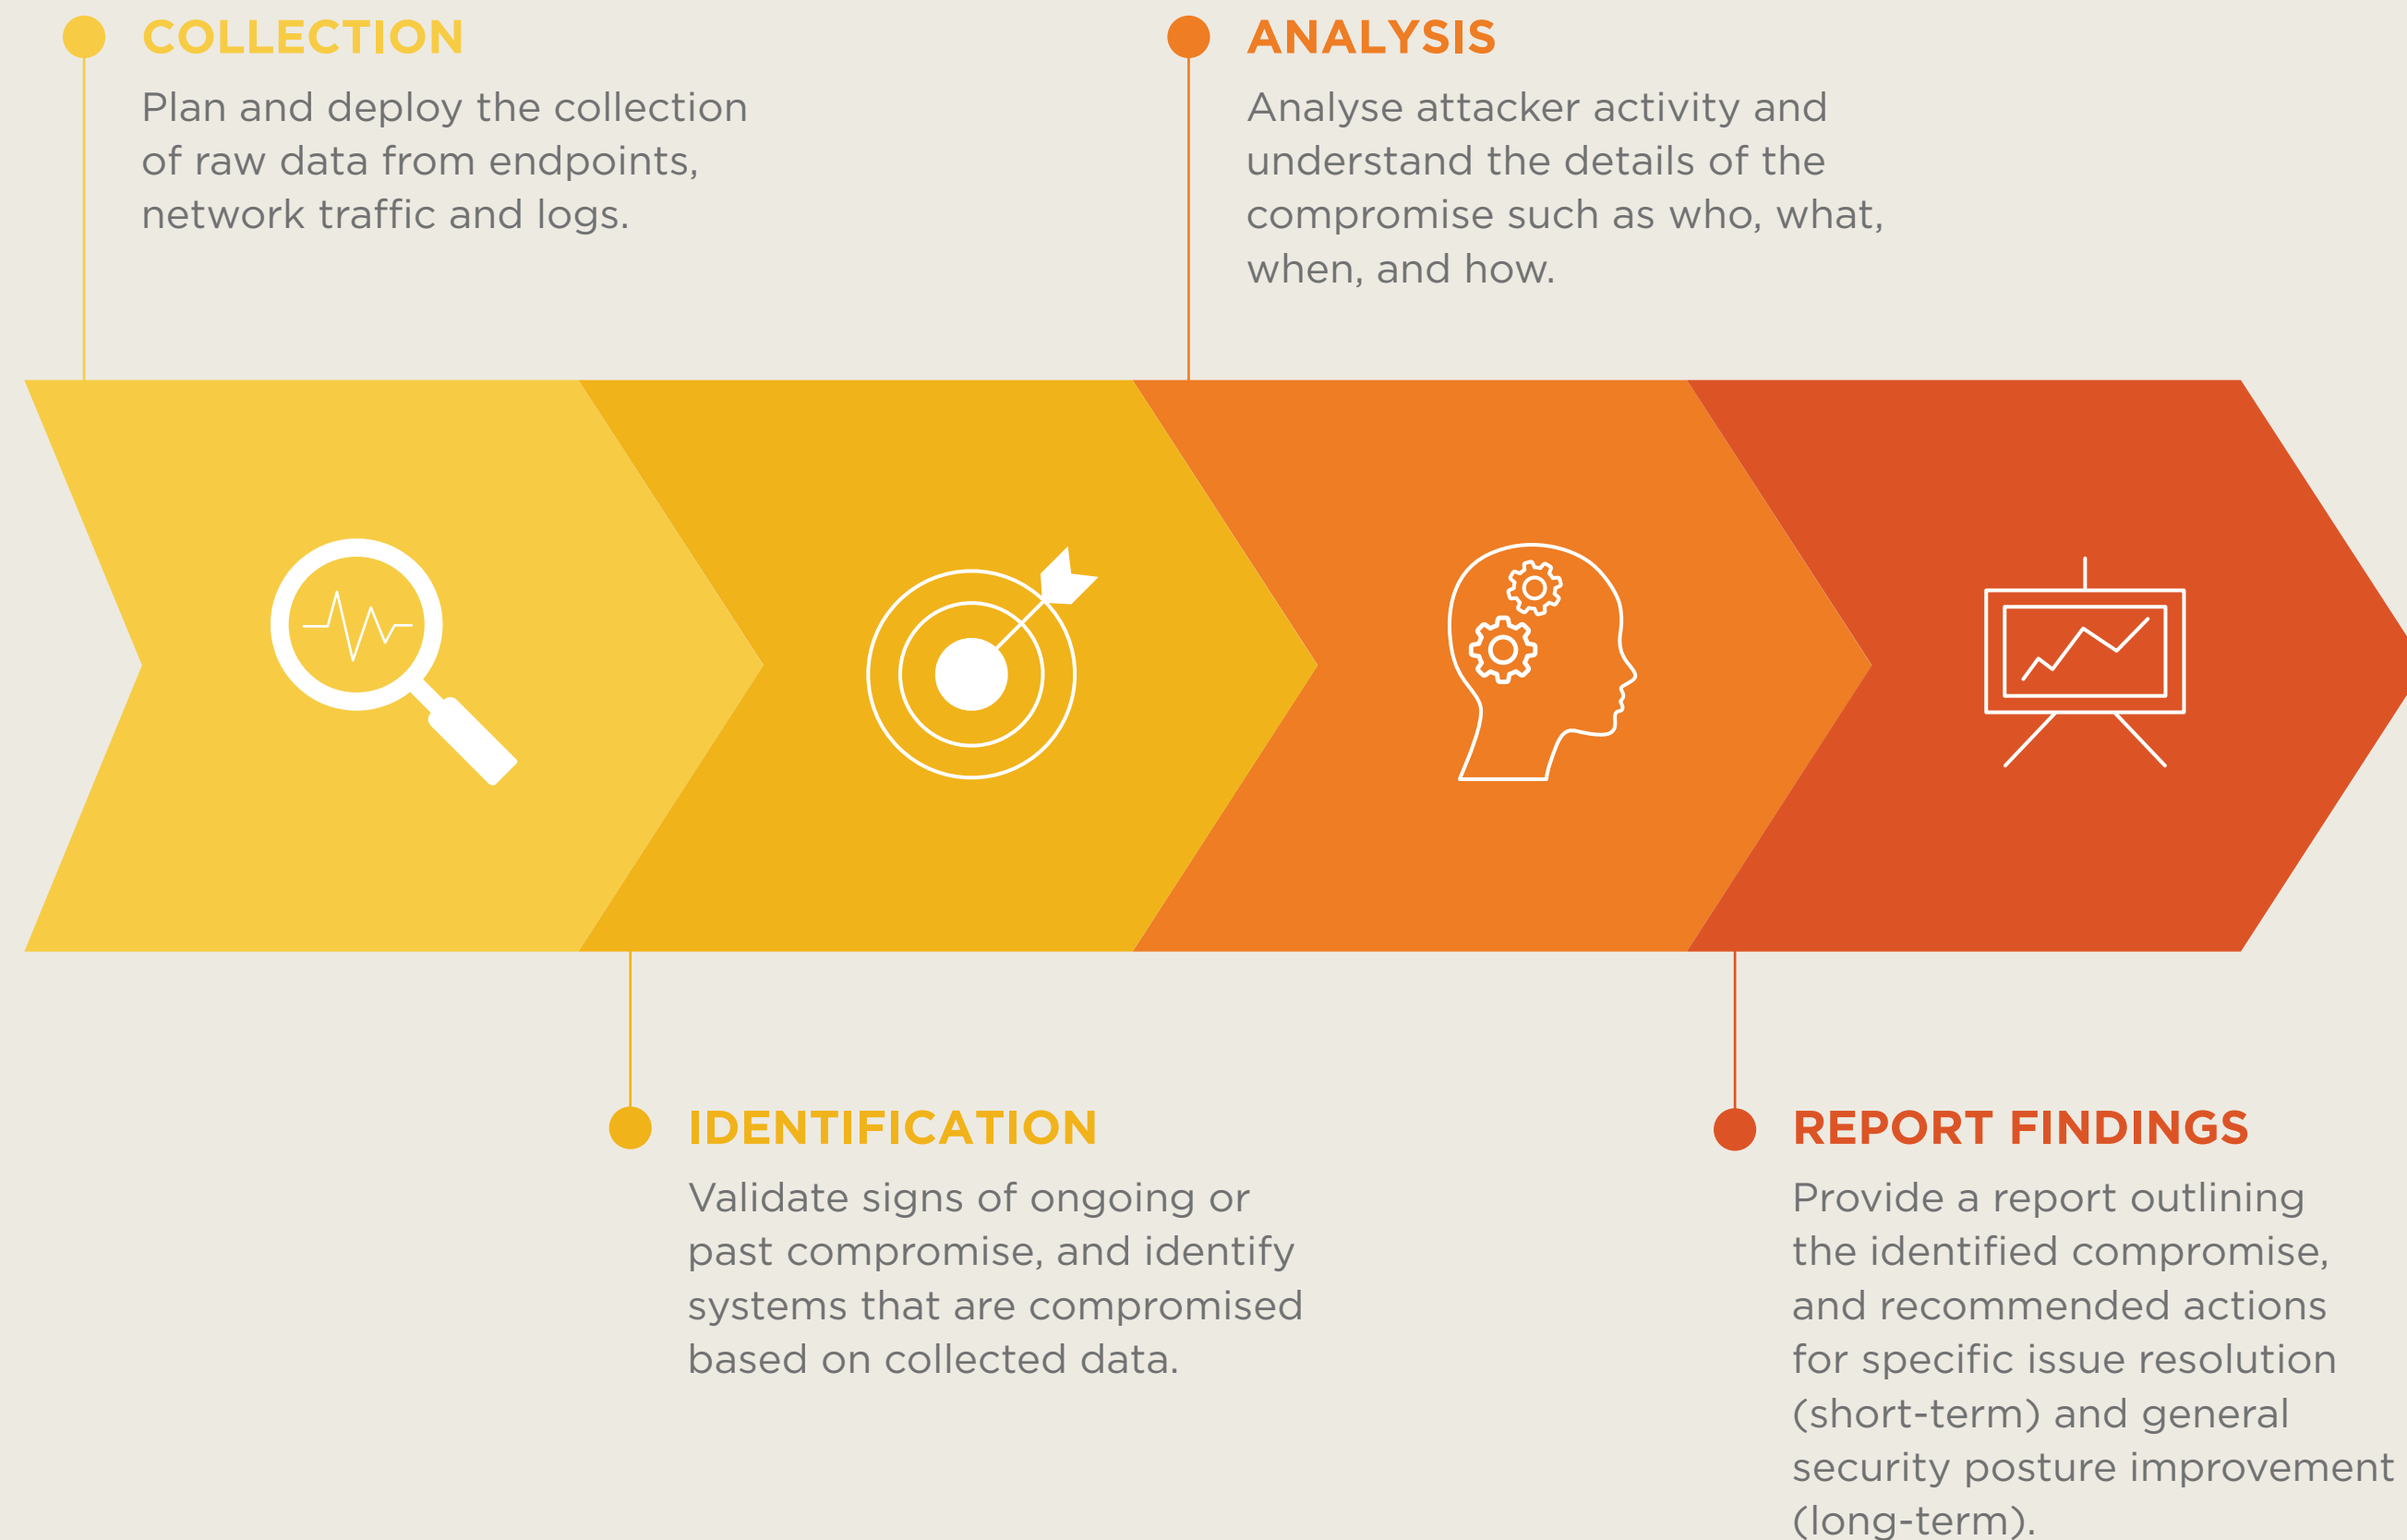

Compromise assessment done by an accredited professional service provider can effectively assist your company in identifying if any of your assets are compromised.

Suppose you suspect that your system may be compromised due to a variety of unexplainable reasons, you are recommended to reach out to a professional service provider for a compromise assessment.

Our Coverage

LGMS can help your organization to discover potential compromise through the following assessment activities:

- Endpoint Compromise Assessment
- Network Compromise Assessment
- Active Directory Compromise Assessment
- Threat Intelligence Search
- Detect & Capture Attacker Activities with Honeypots
- White Box Security Assessment
- and more...

Deliverables

LGMS will present a compromise assessment report with the following:

- Endpoint information and the risks of each endpoint
- List of compromised endpoints (if any)
- Evidence of the attack (if any)
- Associated evidence of data leak from threat intelligence (if any)
- Suspicious lateral movements in the network and user account activities
- Anomalies in the network traffic (e.g. beaconing, callbacks)
- Actionable recommendations
