
Intelligence-Led Penetration Testing

Emerging Threat Scenarios

An Intelligence-Led Penetration Test (Intel-led Pentest) closely mimics the tactics and techniques of sophisticated and persistent cyber attackers intending to compromise an organization's critical systems.

LGMS offers an Intel-led Pentest to assure that your organization is resilient to cyber-attacks based on emerging and evolving threat scenarios.

Compared to a traditional penetration test, an Intel-led Pentest can provide a holistic view of your organization's potential attack surfaces and the resilience of your defenses against cyber-attacks.

Methodologies

Threat Intelligence

Threat intelligence on the target organization is collected and analyzed from two key areas of interest (Targeting & Threat Intelligence).

Penetration Testing

LGMS will perform a penetration test with the use of manual and automated techniques to reflect extreme but plausible cyber-attack scenarios.

Our Coverage

LGMS will help you to discover if your organization is resilient to cyber attacks by:

- Collecting, analysing, and disseminating relevant threat intelligence
- Reviewing, refining, and finalizing threat intelligence
- Creating realistic threat scenarios based on available evidence of real world threat actors
- Executing an intelligence-led penetration test against target systems identified in scope

TARGETING

- Identifying the organization potential attack surface

01

THREAT INTELLIGENCE

- Identifying threat actors relevant to the organization and probable threat scenarios

02

SCENARIO DEVELOPMENT

- Developing threat scenarios to simulate cyber-attacks by relevant threat actors

03

Deliverables

LGMS will present a penetration test report with the following:

- Executive Summary
- Potential Attack Surfaces
- Relevant Threat Actors
- Probable Threat Scenarios
- Penetration Test Technical Details
- Comprehensive Remediation Guidance
- Recommendations for Future Improvements
